

The Research Coordination Network for Evolution in Changing Seas

Compiled by Katie Lotterhos
Northeastern University

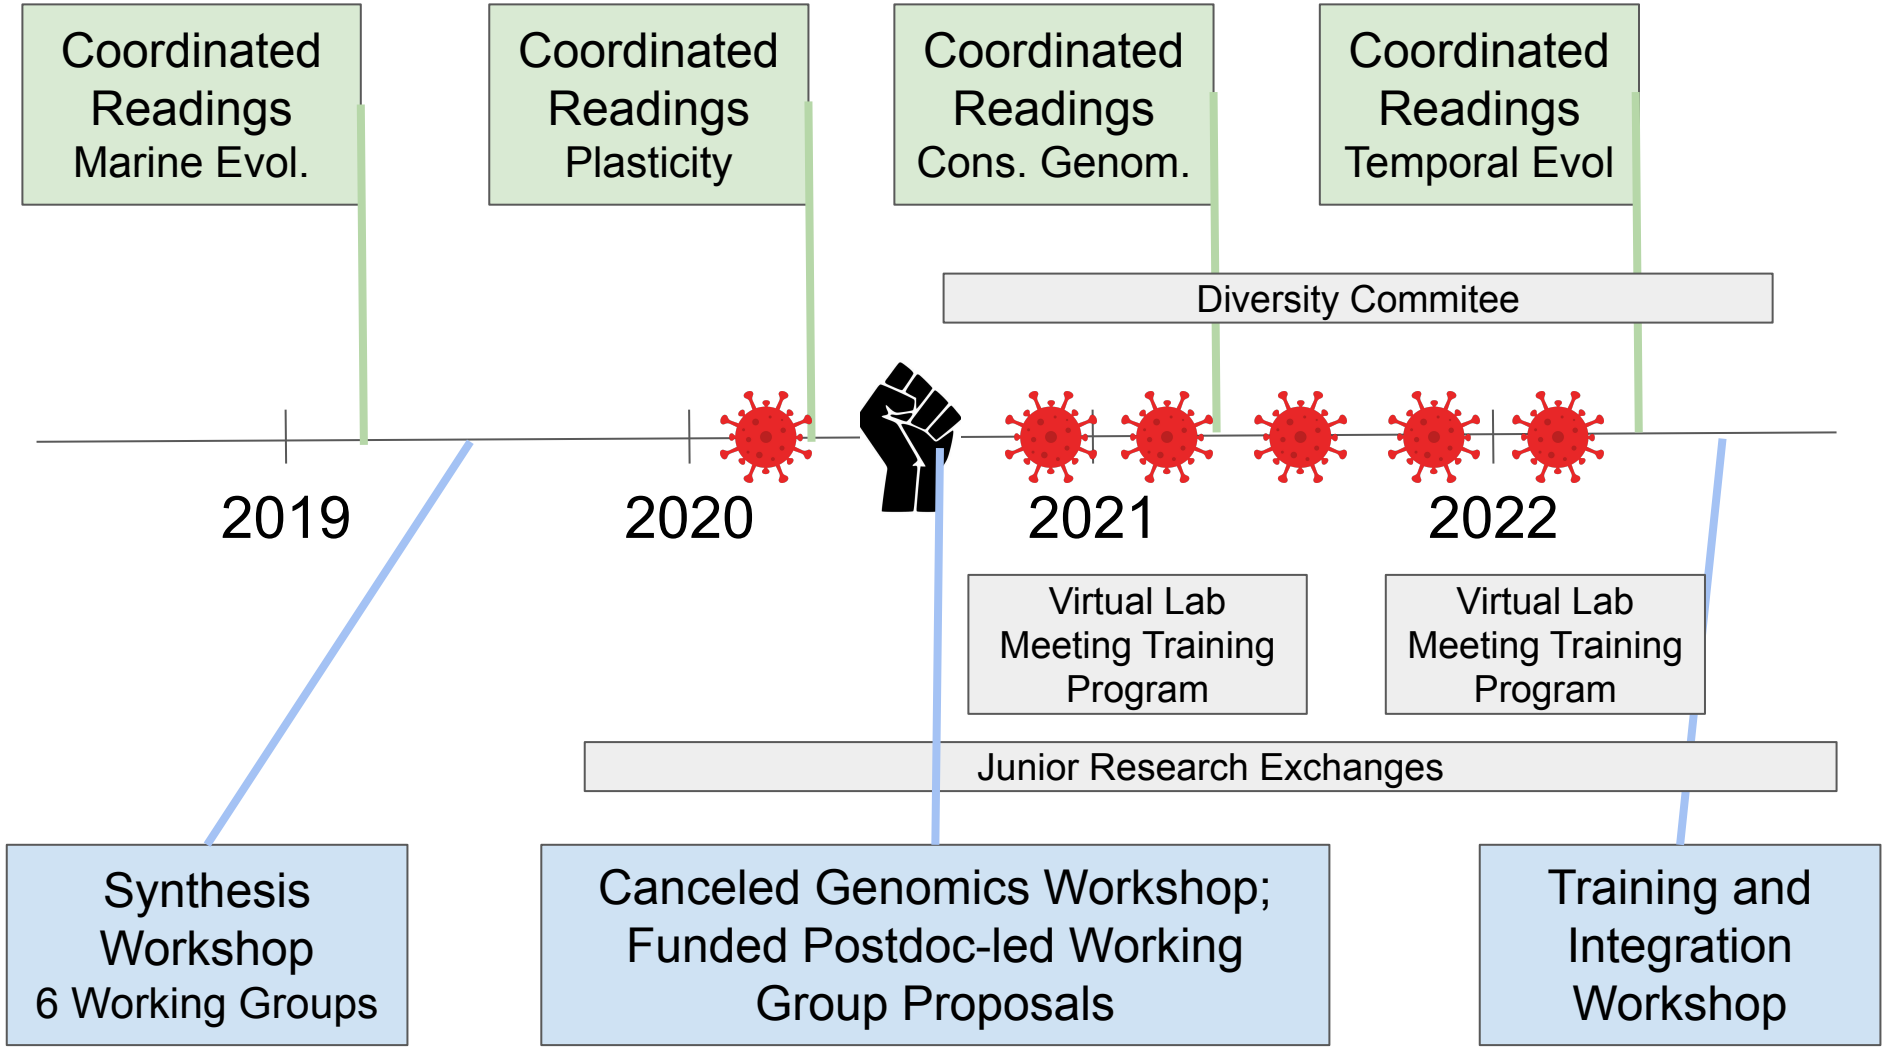

National Association of
Marine Labs October 2023

Goals of Research Coordination Networks

- ❑ Advance a field or create new directions in research or education by supporting groups of investigators to communicate and coordinate their research, training, and educational activities
- ❑ Provide opportunities to foster new collaborations, including international partnerships, and address interdisciplinary topics.
- ❑ Innovative ideas for training, broadening participation, and development of community standards for data and meta-data are especially encouraged

Goals of Research Coordination Networks

- ❑ Advance a field or create new directions in research or education by supporting groups of investigators to communicate and coordinate their research, training, and educational activities
- ❑ Provide opportunities to foster new collaborations, including international partnerships, and address interdisciplinary topics.
- ❑ Innovative ideas for training, broadening participation, and development of community standards for data and meta-data are especially encouraged

Initiative	# of new collaborations
Working Groups	~100
Professional development exchanges	~21

Initiative	Training and Education
Working Groups	3 new websites
Coordinated Readings	Dozens of participants each year
Virtual Lab Meeting Training Program	~ 80 junior academics trained

Introduction

The MarineOmics working group is part of the [RCN for Evolutionary](#) **reproducible** and **robust** genomic research in nonmodel species. Next generation sequencing and bioinformatics advances are rapidly becoming obsolete. MarineOmics aims to support robust genomic research through this dynamic, open-sourced website addressing introductory genomics.

Rigorous: following best principles to identify and mitigate sources of error

Reproducible: when others can reproduce the results with accuracy

Educational Resources from RCN Labs

Please help us build this page of educational resources for teaching at the intersection of marine and evolutionary science. We are particularly interested in teaching materials that feature or highlight research being done by people from diverse backgrounds.

Elementary School (Grades K-6)

- [Preschool Shell Matching Game](#)

Middle School (Grades 6-8)

High School Students (Grades 9-12)

- This webpage put together by the Lotterhos Lab contains activities for teaching evolution and marine science, including:
 - Non-genetic inheritance
 - Effects of ocean acidification on marine calcifiers
 - Seagrass wasting disease
 - Modeling the Dynamic Oyster Microbiome (*Highlights research by a Latina*)
 - Using SLiM to understand and simulate evolution
 - Curriculum for a 6-session "Learn to Code" workshop (1.5 hours per session)

Undergraduate Level

- Paper strip activities for understanding F-statistics For undergraduate and graduate students in learning population and conservation genetics. F-statistics convey important information about the genetic structure of populations. But what do they mean? This learning module teaches F-statistics in a backwards way than normally taught. Instead of giving students data and having them calculate the F-statistics, we give students the F-statistics and challenge them to build the populations that would have those statistics.

Graduate Level or Upper Level Undergraduate

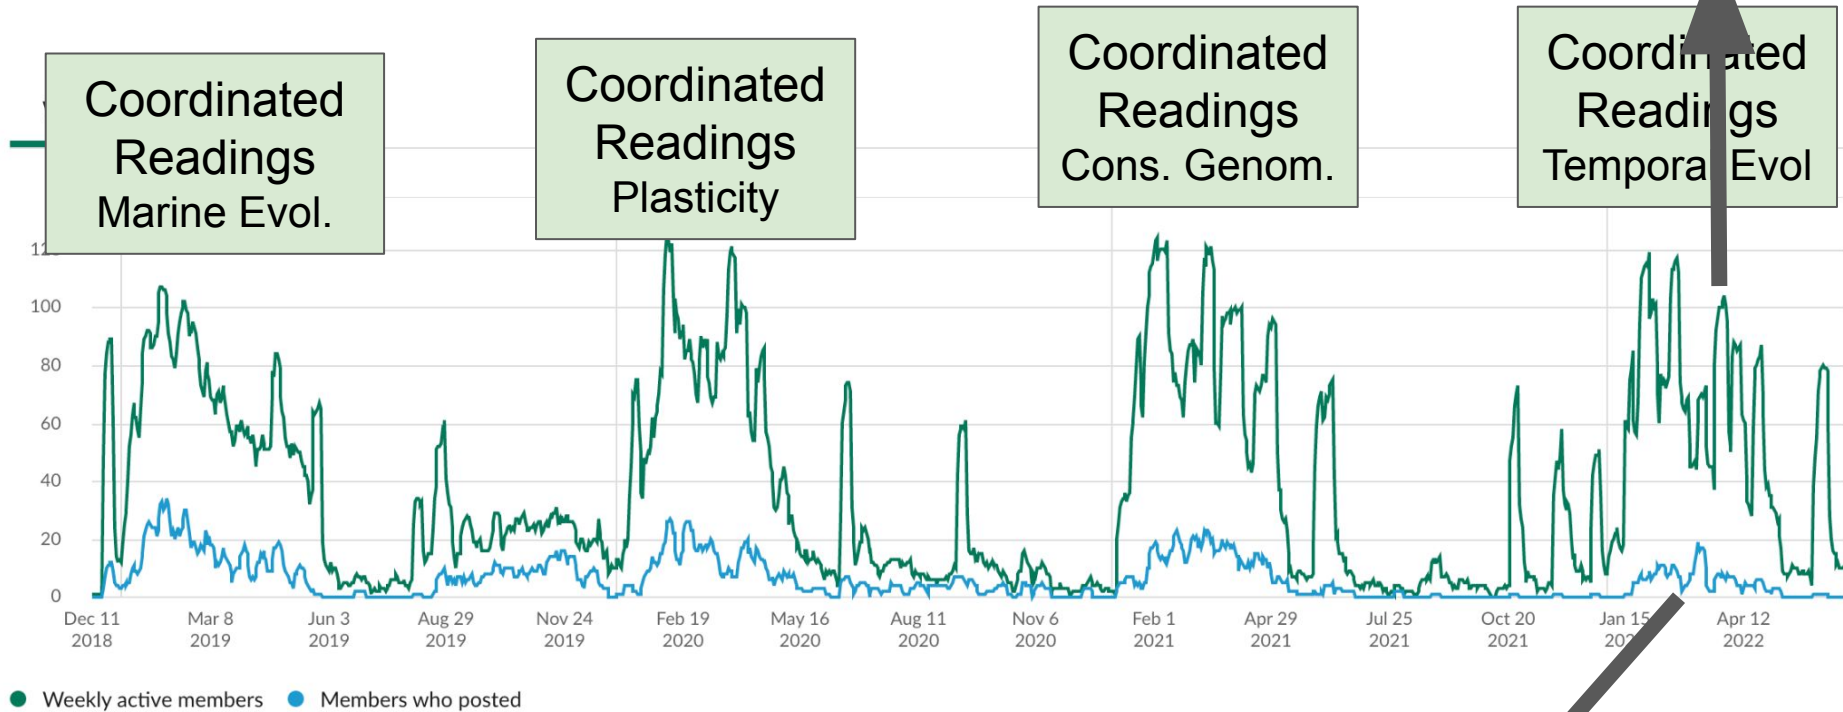

- [A List of R Shiny Apps for Population and Ecological Genetics](#)
- The webpage of the Temporal Genomics working group
 - You-tube recordings of 2021 seminar series and other resources
- The webpage for the marine-omics working group
 - Recordings of panel discussions on genomic data analysis and other resources
- [The webpages for Kelp and Urchin Genomics as a Gateway to Bioinformatics: Teaching Materials]
- Marine Genomics and Bioinformatics Course
- We have two versions of the Marine Genomics course available for use by the community and have made the materials accessible to both instructors as well as students. One version covers a semester (15 weeks) worth of material and the other covers a quarter (10 weeks) of material

Virtual Lab Meeting Training Program-Diversity

- Matches Mentees (undergrads, grad students, techs, in-betweeners) with Mentors
- Mentees receive a \$500 stipend for attending 10 lab meetings virtually, and leading 2 lab meetings

A. Gender diversity

B. Racial diversity

C. Sexual Orientation

Virtual Lab Meeting Training Program- Benefits

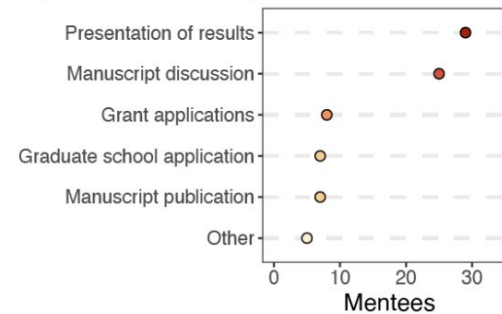

A. Knowledge gained

B. Mentee contributions

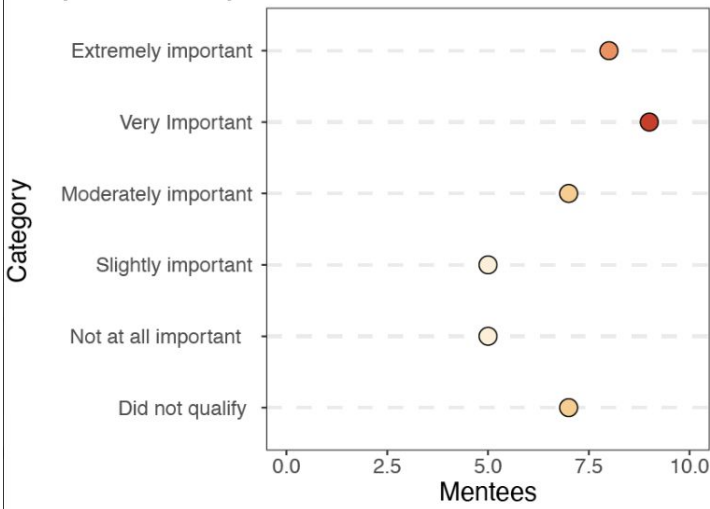

C. Areas of professional development

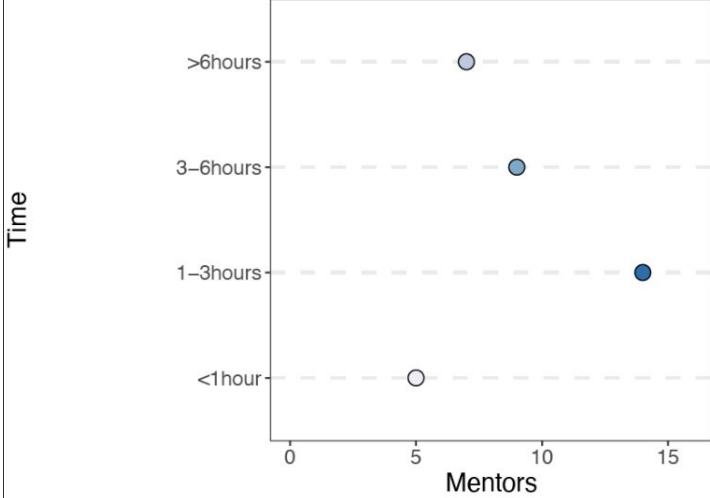

Virtual Lab Meeting Training Program- Cost

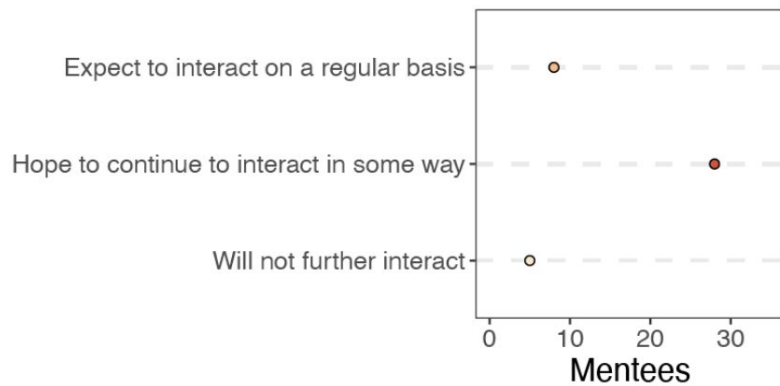

A. Importance of stipend for mentees

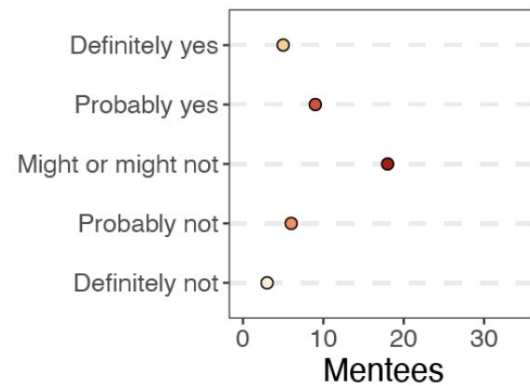

B. Time investment by mentors

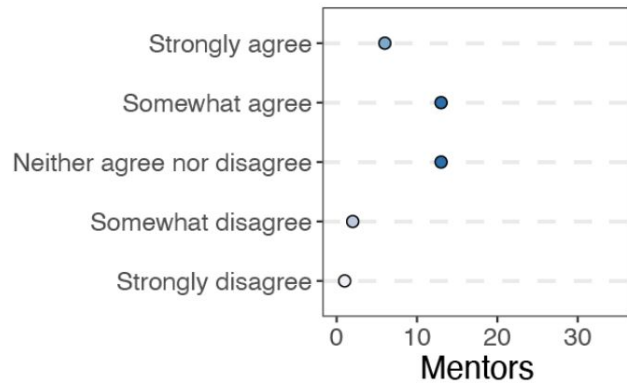

A. Mentees future interactions with mentors

B. Mentees future collaboration with mentors

C. Mentors future interactions with mentees

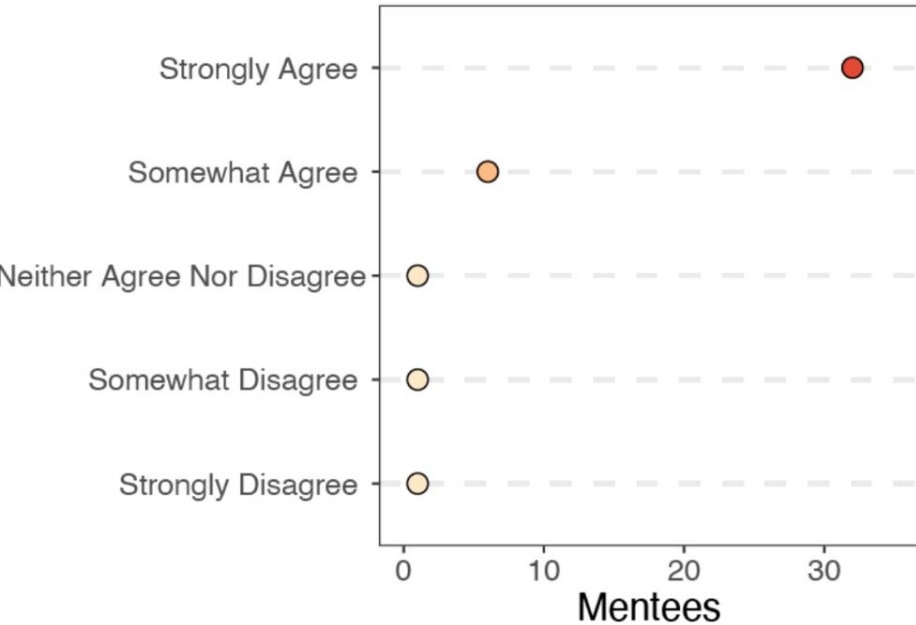

D. Mentors see lab as resource for mentees

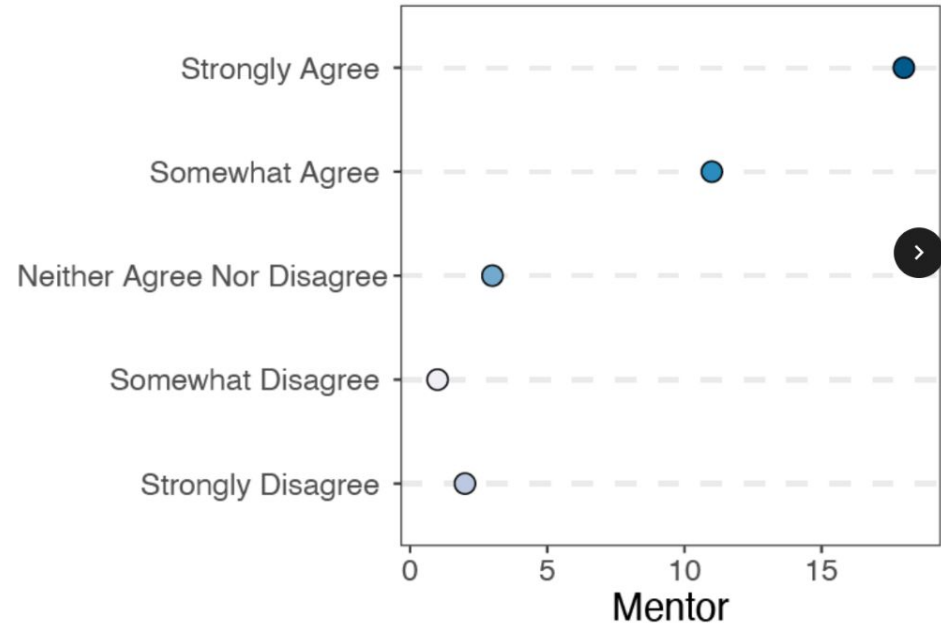

Virtual Lab Meeting Training Program- Overall

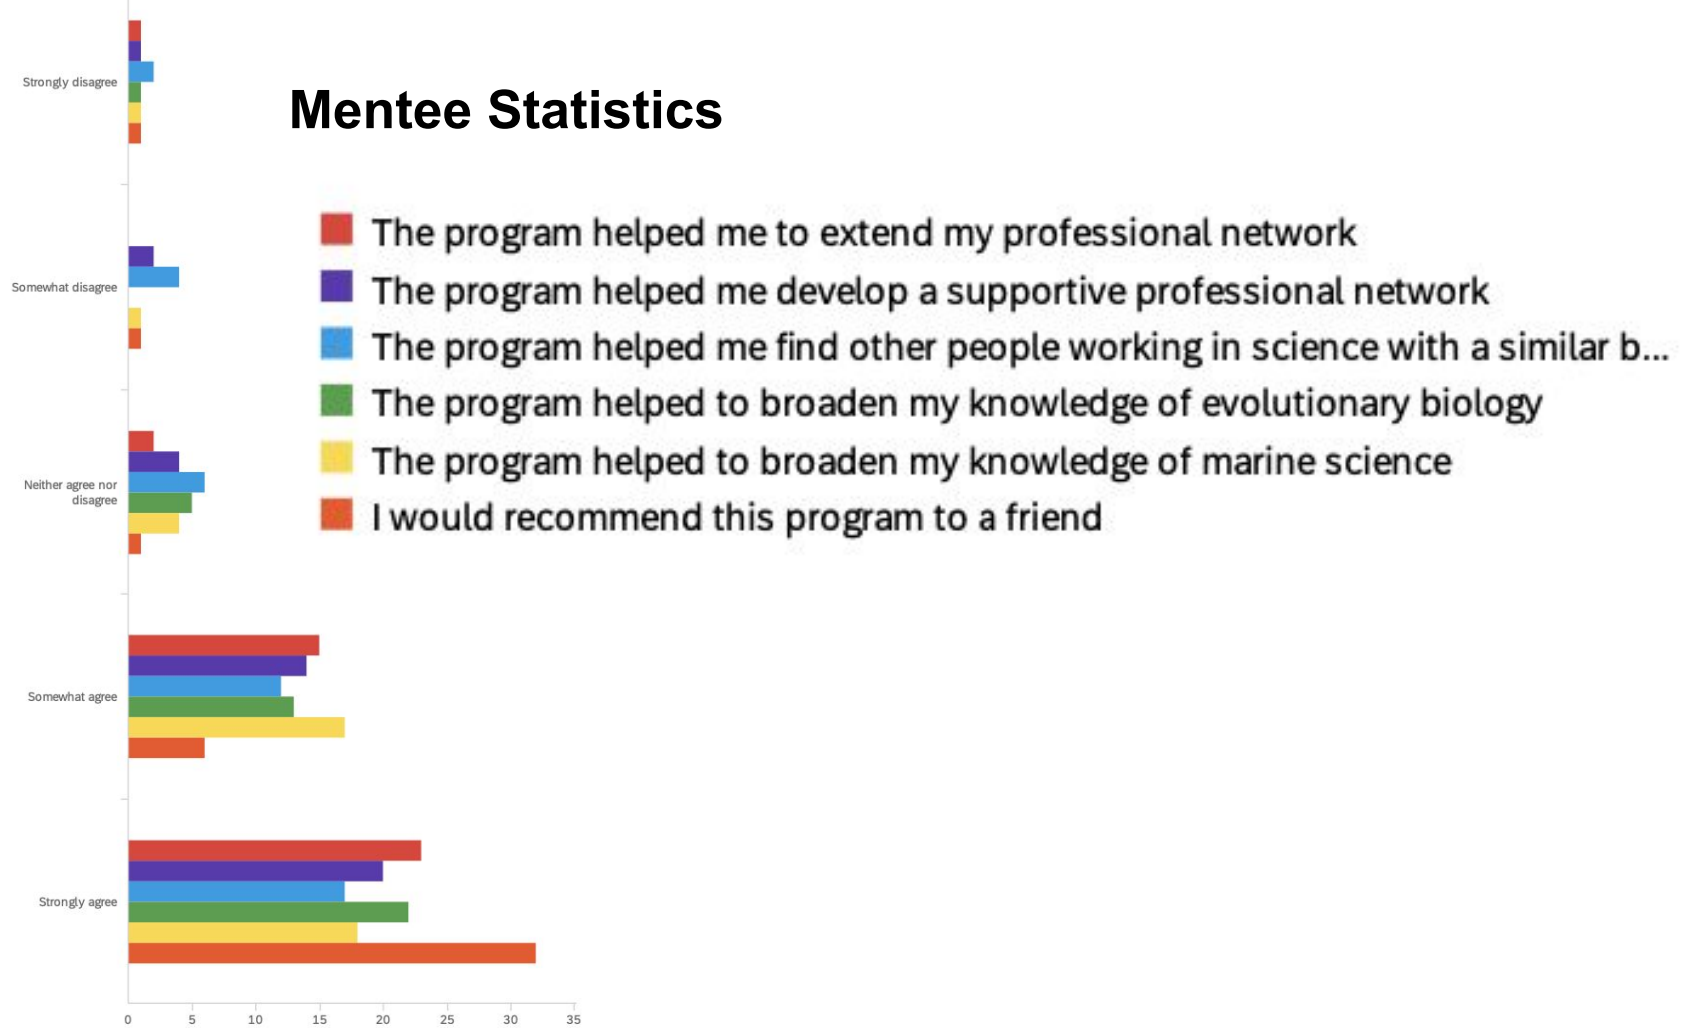

A. Would mentees recommend the program?

B. Would mentors participate again?

Mentee Statistics

On a scale from 1 (lowest rating) to 10 (highest rating), please rate the Virtual Lab Meeting Training Program.

Mentee Statistics

Mentor Statistics

Mentees rate the program higher than mentors

Tips for running an RCN

Self-characterization of our participants as how their research program or interests are divided between marine and evolutionary biology:

Membership sign up in Google Form, stats on webpage automatically updated

Steering Committee, Diversity Committee, should add Grad/Postdoc Association

Working-Group Led Activities

Pay stipends to junior working group members!
(Thanks pandemic!)

Get annual reports from Working Groups in NSF format (Google Form)

Challenges running an open RCN

- Need administrative support
 - Logistics of organizing a large number of stipends and reimbursements
 - Logistics of organizing conferences
 - Keeping membership updated on webpage - people move - also active vs. inactive members
 - Fielding a large number of nuanced questions
- Annual Reports, Research.gov does not like to accept my spreadsheet of participants
- Getting working groups to upload data to BCO-DMO

Data from the Evolving Seas RCN

Data from the Evolving Seas RCN

Synthesis activities conducted with RCN funds have generated new data in the form of simulations or metaanalyses. To be compliant with our NSF grant, these data are archived in a compliant manner at this site:

[Link to the Evolving Seas RCN on BCO-DMO](#)

For RCN members: archiving data and code
